\$8.95 each

Available colours:
Beige, Burgundy,
Grey, Navy, Blue

ADVANTAGES

Features both reflective and photoluminescent markers

Saves time in evacuation, the photoluminescent patch indicates which rooms **need** to be checked vs. which rooms have already been checked.

Durable and able to withstand wheelchair and cart contact

Can be modified to work with wooden door frames.

Designed by a firefighter

Most economical evacuation indicator on the market

HOW THEY WORK

After staff evacuate a room, they **lift the flap on the FlexEvac tag and attach it to the door frame** with a magnet hiding the photoluminescent tag.

This **exposes a VACANT sign** and creates a link between the door and the door frame.

If the door is reopened, the link is broken and the **flap drops down**, covering the VACANT sign and **re-exposing the photoluminescent marker**.

This **marker**, which is visible in dark and smoke-filled corridors, **indicates the room must be checked**.

The markers stay **illuminated for 4-6 hours** and rapidly self-charge once re-exposed to light.

DIFFERENCE

Most other products Indicate that the **room has been checked** (with either a flag or a drop down stick). During a sweep each doors needs to be checked to see if it has been activated. This can be **time consuming** in a dark or smoke filled hallway.

With the **FlexEvac**, if someone has re-entered a room, or if the room was missed in the original evacuation, the photoluminescent marker shows that the **room needs to be checked**, resulting in a much **quicker evacuation** and sweep.

Please note: Any room evacuation system should be mounted below door handle height in the event of smoke filling a hallway and obscuring higher mounted devices. Policy and procedure sheet included with order.
